Opt for World-class Appium® Support with GigaFox™

Mobile Labs offers the best Appium support in the industry. Our completely reimagined mobile device cloud, GigaFox comes with a built-in Appium server featuring high levels of performance and reliability. We offer an authentic Appium server showing our commitment to the Appium open-source project and to the hundreds of customers who rely on Appium for automated testing.

Get Up and Running with Appium in an Hour with GigaFox

Enterprises require high-performance. This includes reliable testing tools for native, hybrid and web apps to meet the demands of digital transformation. Mobility teams can get up and running with automated testing using Appium faster than ever by skipping the cumbersome, time-consuming and error-prone tasks of buying, building and configuring their own Appium servers.

For Microsoft Windows users, GigaFox's built-in Appium server eliminates the need for enterprise mobility teams to obtain separate Apple Macintosh system(s) to support iOS devices, greatly simplifying configurations and enhancing reliability.

Mobile Labs is Your Appium Success Company, powered by GigaFox.

Simplify Operation and Enhance Productivity

deviceConnect's Appium server is designed to simplify operation and enhance productivity.

No specialized Appium start up scripts required

Easily create simultaneous, parallel tests

The cloud automatically chooses the appropriate device for testing and handles smart code signing for iOS

Easily Identify Objects with Appium Inspector

Built into GigaFox, Appium Inspector makes it easy for testers to identify objects in mobile apps, hybrid apps, or on websites running in a mobile browser.

Appium Inspector makes object identification easy by providing the necessary attributes, such as ID name, text, location, etc., required to write an Appium test script through a simple mouse click on the object in the mobile app or website that requires testing.
